Nguyen Tien Huy

DevOps & Infrastructure Engineer • AWS Solutions Architect Associate Certified

Go Vap District, Ho Chi Minh City • huyng2724@gmail.com • 0905963722 • LinkedIn • GitHub • Portfolio • Blog

Education

HCMC University of Technology and Engineering — Ho Chi Minh City, Vietnam
Bachelor of Engineering, Software Engineering — Sep 2022 – Sep 2026

Experience

Bosch Global Software Technologies (BGSW Vietnam) — Ho Chi Minh City, Vietnam
DevOps Engineer — Apr 2026 – Now

- **Engineered** reusable, centralized **CI/CD** workflow templates (lint, build, scan, push) across repositories with **Trivy** and **SonarQube** gates, and self-managed **self-hosted runners** (pre-baked AMI + persistent build caches) that cut pipeline runtime ∼**65%** (∼35 to ∼11 min).
- **Extended CI/CD** pipelines with **automated deployments** to **OpenShift** and on-prem VMs.
- **Designed** a centralized, reusable **AWS** infrastructure template using **Terraform** + **Terragrunt** that can be applied to any project with minimal changes and consumed from any repository, with parameterized modules, **multi-environment** support, **S3 remote state**, and per-module **GitHub Actions** pipelines across networking, compute, and edge services.
- **Designed** and **migrated** a **multi-tenant observability stack** (**Grafana**, **InfluxDB**, **Telegraf**) handling ∼**100k messages/min** (**multiple orgs**, each ∼**100k series**) to a new production **OpenShift**/**Kubernetes** cluster via **ArgoCD** and **Helm** (app-of-apps pattern). **Owned** cluster **security** through checklist-based scanning and remediation, designed the **data collection** and **monitoring approach**, and implemented **KEDA-driven HPA** for high-throughput collectors.
- **Owned** the day-to-day management and operations of the department's full **AWS platform** and > 5 **on-prem Linux servers**, covering **provisioning**, **monitoring**, **patching**, **troubleshooting**, and **cost/security optimization**.
- **Designed** and **deployed** three **event-driven AWS** automation stacks with modular **Terraform**: a **Bedrock** token-usage cost control system with per-**IAM-user tracking** and **quota capping** to DynamoDB, a continuous monitor that detects **IAM privilege changes** with **SNS alerts**, and a real-time voice AI assistant built on a native **AWS AI** stack over a secure **WebSocket**.

AWS First Cloud Journey (FCJ) Training Program — Ho Chi Minh City, Vietnam
Program Trainee — Apr 2025 – Aug 2025

- Built a multilingual conversational AI chatbot on a fully serverless AWS architecture (Lex, Lambda, S3, API Gateway, Bedrock).
- Integrated AWS Transcribe into a tool as an in-house alternative to Microsoft Teams' built-in transcription.

Personal Projects

Manga App — Cloud-Native Full-Stack Platform (Capstone Project) — Jan 2026 – Jun 2026

Full-stack developer, team of 2; owned infrastructure, CI/CD, and cloud deployment.

- Tech Stack: Flutter (web + mobile), Spring Boot 21, PostgreSQL, Redis, Terraform/Terragrunt, AWS.
- Provisioned the full **AWS infrastructure** with modular **Terraform + Terragrunt**: **VPC**, **EC2**, **ALB** with **ACM-managed TLS**, **CloudFront**, **Route53**, **IAM**, and **CloudWatch/SNS** monitoring and alarms.
- Built **GitHub Actions CI/CD** pipelines for both **frontend (Flutter)** and backend: automated tests with coverage and **SonarCloud** analysis, **Docker** build to Amazon **ECR** with **Trivy** scanning, and automated deployment.
- Load-tested the deployed system with **k6**, sustaining ∼**700 concurrent virtual users (peak ∼1,200)** on AWS.

Certifications

- AWS Certified Solutions Architect – Associate (SAA-C03) — Amazon Web Services, 2026
- AWS Certified AI Practitioner — Amazon Web Services, 2026
- Software Development with Scrum — Axon Active, 2025
- Google Cloud Skills Boost: GCP Fundamentals

Skills

Cloud: AWS, Azure, GCP
IaC & Provisioning: Terraform, Terragrunt, Packer, CloudFormation
Containers & Orchestration: Docker, Kubernetes, OpenShift, Helm (app-of-apps), Kustomize, KEDA, HPA
CI/CD & GitOps: GitHub Actions, Gitea Actions, ArgoCD, self-hosted runners, reusable pipeline templates
Observability: Grafana, InfluxDB, Telegraf, CloudWatch
Security & Quality: Trivy, SonarQube/SonarCloud, Dependency-Track, k6, SBOM/CVE remediation, cluster security hardening, IAM privilege monitoring
Automation & Scripting: n8n (self-hosted), Bash, Python, cron, webhook/API orchestration
Scripting & Languages: Bash, Python, Java, JavaScript; Git, Linux
Spoken Languages: Vietnamese (native), English (IELTS 6.0)
